Experience

AI Engineer

Strategy& - PwC Network

Beirut- on site

Jan 2026 - Present

- Leading on revenue forecast modeling.
- Engineering of production grade RAG systems.
- implementing AI solutions to leverage automation as internal solutions.
- Developing agentic systems as automation services for multiple departments.
- Tech Stack: Python (langgraph, langfuse, FastAPI, Pytorch, Scikit-learn), Docker, Azure DevOps Services, Kubernetes, Jira for Agile development.

Technical Consultant

QuanTech - part of Midis Group - IBM Partner

Beirut- on site

Oct 2025 - Jan 2026

- Implementing an agentic system that is focused for financial purposes, serving as a proof of concept for different banks in Lebanon.
- Constructing a fraud detection system that's oriented around detecting fraud credit card transactions.
- Tech Stack: Python (langchain, langfuse, fast-agent, Fast API, Scikit-learn), Linux, Docker, Open Shift, WatsonX IBM Platform, WSO2 API Manager.

Data Scientist

800Storage

Dubai - Remote

Feb 2024 – July 2025

- Engineered a real-time facial identification system using live CCTV feeds, enabling automated personnel recognition with high-precision embedding and classification workflows.
- Constructed end-to-end data analysis pipelines for automated cleaning, transformation, and visualization, accelerating operational decision-making across departments.
- Developed a volume estimation model achieving 93% accuracy, cutting operational overhead by 25% and boosting warehouse efficiency by 30%.
- Fine-tuned large language models to optimize performance in sales tasks, resulting in a 40% increase in sales conversions.
- Tech stack: Python, Linux, Java Springboot, Docker, Kubernetes, Amazon Web Services, Redis

Data intern

UNICEF – United Nations

Lebanon – On site

Sep 2023 – Feb 2024

- Validated and audited geospatial and operational data across 20+ project sites, ensuring integrity and consistency for downstream analysis and reporting.

- Improved data accuracy by 15% by designing and applying automated data cleaning, validation, and visualization workflows using Python and Pandas.
- Enhanced digital learning platforms by integrating data-driven insights, resulting in a 20% increase in student engagement and interactivity.

Trainee
ZAKA AI

Lebanon – Remote
July 2023 – Nov 2023

- Implemented machine learning algorithms on real-world data, producing 5+ deployable projects.
- implemented a full-scale application of an educational assistant with multi-functional features to enhance user experience.
- Integrated data cleaning and data visualization methods on data.

Education

MSc in Computational Science, Machine Learning Track

Expected 2026

American University of Beirut

- **Awards:** Graduate Fellowship and Assistantship Program – Full merit scholarship
- **Teaching Assistant Duties:** CMPS 262 Data Science in R and Python, CMPS 208 Business for Computing
- **Relevant Coursework:** Statistical Learning, Special topics: LLMs, Partial Differential Equations, Algorithmic Graph Theory, Reinforcement Learning, AI in Industry

Graduate diploma in AI and data science

Graduate of 2024

American University of Beirut

- **Relevant Coursework:** Data Science, Machine learning, Deep learning, Business Analytics, Arabic Natural Language Processing.

Bachelor of Science in Physics

Graduate of 2023

Beirut Arab University

- **Awards:** Top Student of the Department (2022–2023)
- Faculty of Science Representative in university council (2022-2023)
- **Relevant Coursework:** Linear Algebra, Quantum Mechanics I, Quantum Mechanics II, Solid State Physics, Electronics, Java for Computing, Multivariate Calculus, Special topics in mathematical methods for physics: Complex Analysis.

Projects

Simulation and Exploration of different heat conduction models: Fourier and Non-Fourier

- Conducted comparative analysis of classical Fourier heat conduction and advanced Non-Fourier models, including Green–Naghdi frameworks.
- Investigated physical inconsistencies in traditional models, focusing on resolving the paradox of infinite thermal propagation speed.

- Developed and validated numerical simulations to benchmark performance and applicability of each model under transient thermal conditions.

3D to 3D voxelized objects Reconstructions using transformer architectures

- Designed and implemented a transformer-based architecture for 3D voxel reconstruction from partial or degraded inputs.
- Proposed a novel voxel completion pipeline capable of handling raw STL mesh data for robust shape restoration.
- Achieved high-fidelity reconstructions, demonstrating superior generalization over baseline 3D autoencoder models.

Cancer Type Classification on X-Ray images data, SOTA results - [Github Repository](#)

- Built a multiclass cancer classifier using few-shot transfer learning on limited medical X-ray data.
- Integrated InceptionV3 and ResNet50 backbones into a hybrid model architecture with a custom dense head for high-accuracy cancer type prediction.
- Achieved state-of-the-art performance on target datasets; maintained reproducibility with modular TensorFlow/Keras pipeline in virtualized Jupyter environments.
- Codebase publicly available on GitHub for collaborative research and extensions.

Skills

Programming & Development: Python, R, Julia, Java, JavaScript, SQL

Web & API Frameworks: FastAPI, Flask, React, Springboot

Machine Learning & AI: PyTorch, Transformers, LLMs, RAG, CNNs, Autoencoders, Vision Transformers, 3D Computer Vision

Databases & Retrieval Systems: PostgreSQL, MongoDB, FAISS, BM25

Cloud Platforms & MLOps: AWS, Docker, Kubernetes, Spark, Airflow, MLflow, redis, Open shift, MLOps pipelines, CI CD

Platforms & Tools: Linux, Jupyter, VS Code, Git, GitHub/GitLab, Colab

Analytics & Visualization: Advanced analytics, interactive dashboards, data visualization (Matplotlib, Seaborn, Plotly)
